

REISSUE APPLICATION DECLARATION

As the below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name.

I believe I am an original, first and sole inventor of the subject matter which is described and claimed in Letters Patent No. 6,307,847, granted on October 23, 2001, and for which invention I solicit a reissue patent on the invention entitled METHOD OF ADDRESSING MESSAGES AND COMMUNICATIONS SYSTEMS, the specification of which is attached hereto.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims.

I hereby state that I have reviewed and understand the contents of the specification, including the claims, as amended by the accompanying Amendment.

I acknowledge the duty to disclose information known to me to be material to patentability as defined in Title 37, Code of Federal Regulations §1.56.

In an abundance of caution, in accordance with the duty to disclose information and in order to assist the Office in evaluating the current reissue application, I would like to bring to the attention of the Examiner events that occurred during prosecution of the application which ultimately issued into U.S. Patent No. 6,307,847 for which reissue is being sought. In an Examiner's Amendment accompanying the Notice of Allowance mailed May 14, 2001, Claim 42 of the application (Claim 1 of the patent) was amended as follows:

A method of establishing wireless communications between an interrogator and individual ones of multiple wireless identification devices, the wireless identification devices having respective identification numbers and being addressable by specifying identification

numbers with any one of multiple possible degrees of precision, the method comprising utilizing a tree search in an arbitration scheme to determine a degree of precision necessary to establish one-on-one communications between the interrogator and individual ones of the multiple wireless identification devices, a search tree being defined for the tree search method, the tree having multiple selectable levels respectively representing subgroups of the multiple wireless identification devices, the level at which a tree search starts being variable, the method further comprising starting the tree search at a any selectable level of the search tree. Claim 65 of the application (Claim 24 of the patent) was amended by Examiner's Amendment as follows: A communication system comprising an interrogator, and a plurality of wireless identification devices configured to communicate with the interrogator in a wireless fashion, the wireless identification devices having respective identification numbers, the interrogator being configured to employ a tree search, in a search tree having multiple selectable levels, to determine the identification numbers of the different wireless identification devices with sufficient precision so as to be able to establish one-on-one communications between the interrogator and individual ones of the multiple wireless identification devices, wherein the interrogator is configured to start the tree search at a any selectable level of the search tree.

STATEMENT OF INOPERATIVENESS OF ORIGINAL PATENT:

I verily believe the original patent to be partly inoperative or invalid by reason of my having claimed less than I had a right to claim in the original patent. All errors which are being corrected in the present reissue application, up to the time of the filing of this reissue declaration, arose without any deceptive intention on my part.

CONCURRENT PROCEEDINGS:

The patent for which reissue is requested is not and has not been involved in any concurrent or prior interferences, reissues, reexaminations, or litigations.

IDENTIFICATION OF THE ERROR:

The error which results in the patent being partially inoperative or invalid includes a failure to claim a system wherein devices receiving a command from an interrogator are respectively configured to determine if their chosen random values fall within a specified group and, only if so, send a reply to the interrogator, wherein sending a reply to the interrogator comprises transmitting a unique identification number of the device sending the reply. More particularly, one instance of error is found in Claim 34, which is unduly limited, in part, by being limited by reciting that sending a reply to the interrogator comprises transmitting both a random value of the device sending the reply and the unique identification number of the device sending the reply. This error in Claim 34 is addressed by the accompanying reissue application by presenting Claim 38 which tracks issued Claim 34, but which omits the limitation related to transmitting the random value of the device sending the reply. Claim 34, and other claims include additional errors through inclusion of other limitations that are not included in claims added in the accompanying Amendment. Thus, this is a broadening reissue application.

Every error in the patent which was corrected in the present reissue application, and which is not covered by a prior oath/declaration submitted in this application, arose without any deceptive intention on the part of the applicant.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statement may jeopardize the validity of the application or any patent issued therefrom.
